CHANGING THE ORDER OF LINKS IN THE NAVIGATION AREA

You may decide to change the order of your Navigation Links. This is easy to do.

Select your web site folder and click on the Order button.
Hover your cursor over the order number of the link you want to move (not over the name of the page/link). Your cursor will change to a black double arrow. Drag the item to the place in the order you want it to display. You can also use the blue arrows on the right to move items.

The order of the Navigation Link display will have changed.

Don’t forget to publish your new page.
