Accessing your Barracuda Spam Filter

Open Internet Explorer or your preferred Internet Browser, copy and paste the URL line below:

http://filter1.gcccd.edu:8000/cgi-mod/index.cgi

You should see the screen below:

Enter your email address in the box for “Username” and click the button “Create New Password”. This will send your account information to your email address.

You can then use this information to change your password from the “Preferences” screen.
Then you can login to see your SPAM filter messages:

If the message is from a trusted source you may select to Whitelist the message. Or delete any spam messages. Messages that are older than 15 days will be removed.
To add a sender or domain to the Blacklist/Whitelist select the “Preferences” tab, and click “Whitelist/Blacklist”.

To Whitelist a sender or domain, enter a full e-mail address (user@domain.com) or domain (domain.com) under the “Allowed Email Addresses and Domains (Whitelist)” heading. Whitelisted emails will be scanned for viruses, but will not be analyzed for spam.

To Blacklist a sender or domain, enter a full e-mail address (user@domain.com) or domain (domain.com) under the “Blocked Email Addresses and Domains (Blacklist)” heading. Blacklisted email will always be blocked.
